

Growing the BrightTV subscriber base

One record = one viewing session. This dashboard answers the four CEO questions: how users and usage are trending, what drives consumption, what content fixes low days, and where the growth levers are.

QUESTION 1

User and usage trends

Who is watching BrightTV, how often, and for how long?

SESSIONS

9 995

UNIQUE SUBSCRIBERS

4 386

2.3 sessions each

TOTAL HOURS WATCHED

1 522

AVG SESSION

9.1 min

37% under 1 minute

EMAIL CAPTURED

💡 What the trend data says

- 4 386 subscribers generated 9 995 sessions (2.3 per subscriber) and 1 522 hours of viewing.
- Live Events leads on volume with 1 770 sessions — sport and live events dominate the schedule.
- Viewing peaks on Friday and around 19h SAST, and the youth Adults segment supplies the largest share of sessions.
- 51% of subscribers watched only once, so retention — not just acquisition — is the growth constraint.

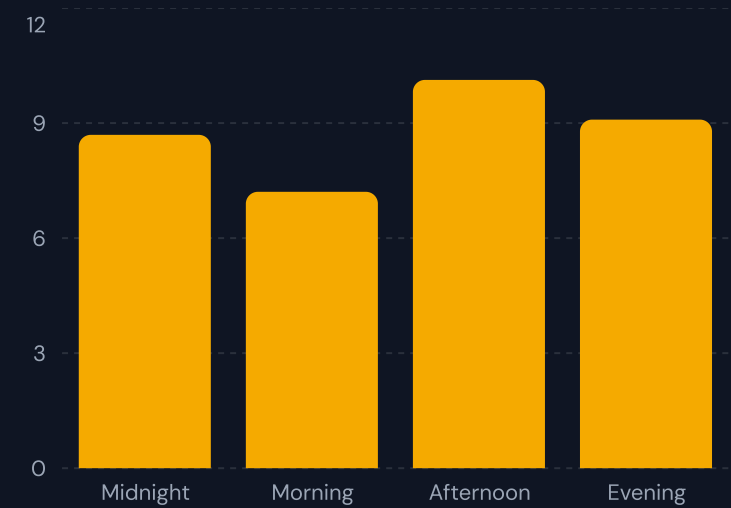

QUESTION 2

What influences consumption

Which factors move average watch time per session?

Time of day

Avg minutes per session (SAST)

Weekday vs weekend

Avg minutes per session

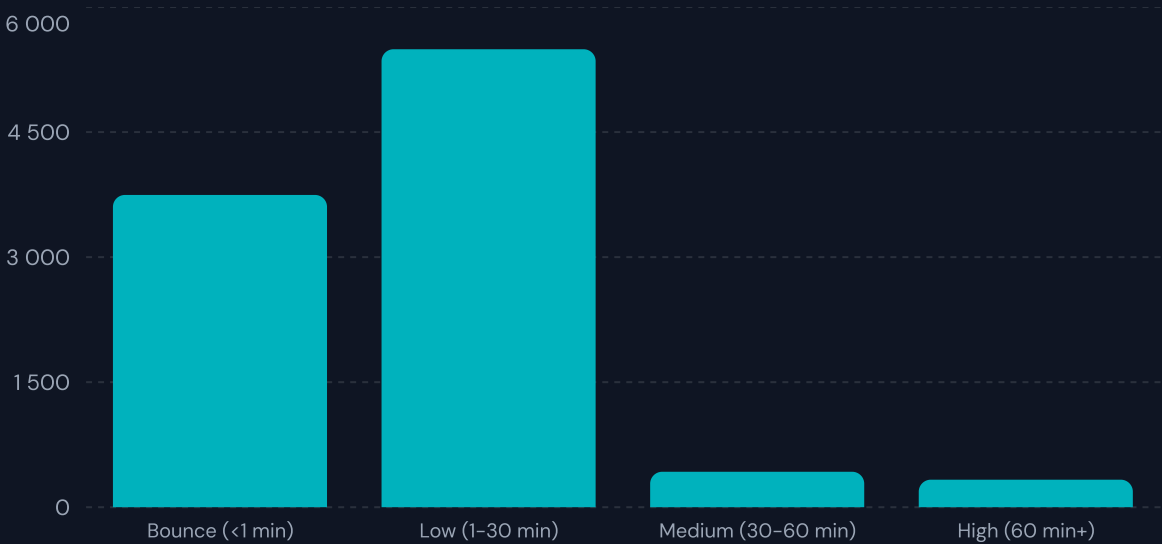

Age group

Avg minutes per session

Session quality mix

Sessions by screen-time bucket

When people watch

Sessions by day × time of day (SAST)

	MIDNIGHT	MORNING	AFTERNOON	EVENING
Mon	181	146	291	355
Tue	187	181	437	503
Wed	190	184	700	518
Thu	147	230	507	525

Fri	204	261	544	665
Sat	177	237	560	660
Sun	193	183	500	529

💡 Consumption drivers

- Daypart is the strongest lever: Afternoon (12–17) sessions run longest at 10.1 minutes.
- Weekend sessions are longer, but weekdays carry far more volume — schedule tentpole content accordingly.
- Kids viewers watch longest (12.8 min), while 37% of all sessions end inside a minute — a content-discovery and streaming-quality problem, not a demand problem.
- Content genre matters: live sport and event channels pull the deepest sessions, entertainment and kids channels pull frequent but short ones.

QUESTION 3

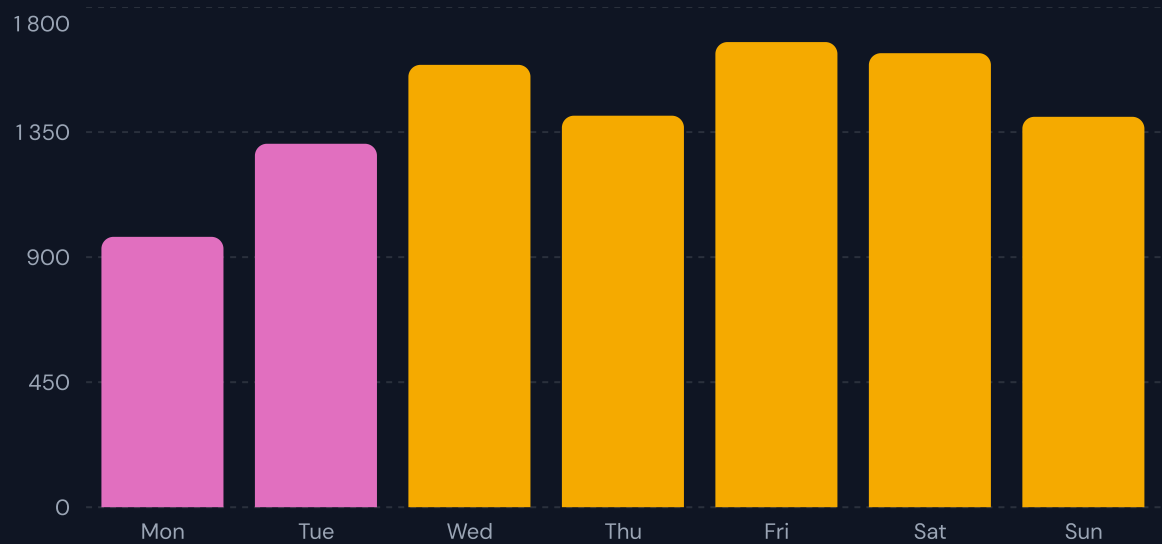

Fixing the low-consumption days

Which days under-deliver, and what content should fill them?

Consumption by day of week

Sessions Subscribers Hours

Sessions

Content that over-indexes on Monday & Tuesday

Index vs. the channel's all-week share (100 = average)

💡 Programming recommendation

- Monday and Tuesday carry the least viewing time (2 281 sessions). These are mid-week, low-event days with no live sport anchor.
- Trace TV and CNN already over-index on those days — schedule marquee episodes, midweek live sport (highlights, studio shows) and premieres there.
- Add appointment viewing: a weekly local drama or reality premiere in the 18:00-21:00 SAST peak, plus a kids/family block in the afternoon when Cartoon Network and Boomerang are active.
- Push a 'what's on tonight' notification to email- and social-reachable subscribers on the two low days only — the cheapest way to shift volume without new content spend.

QUESTION 4

Growing the subscriber base

Where are the CVM opportunities to acquire, retain and reactivate?

REPEAT SUBSCRIBERS

48.7%

51.3% watched only once

SESSIONS PER SUBSCRIBER

2.3

frequency to grow

MARKETABLE BASE

100% / 100%

email / social on file

PROFILE DATA GAPS

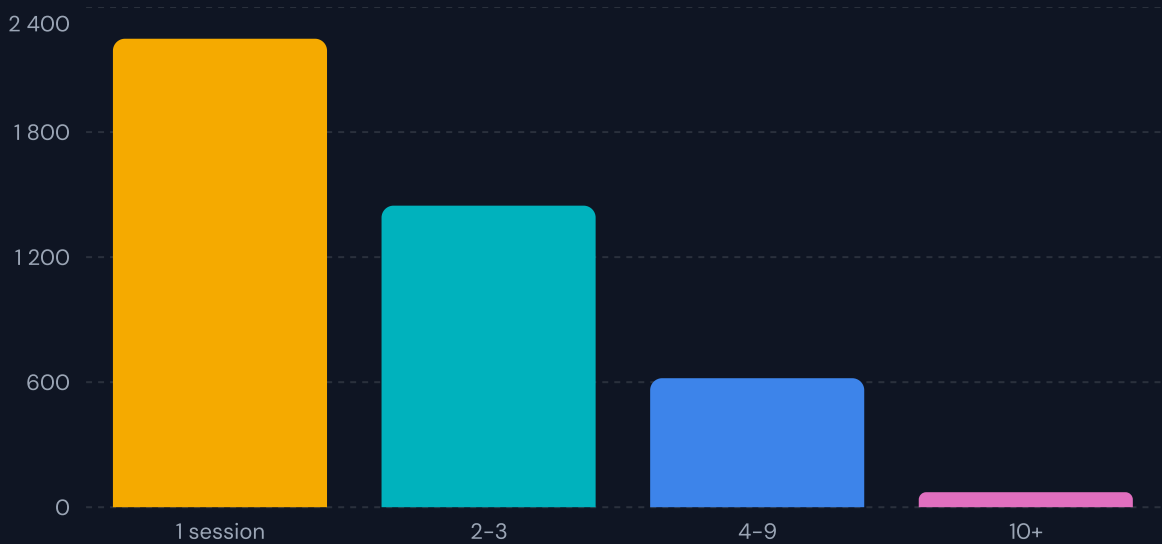

13.5%

unknown ethnicity · 4.0% region unclassified

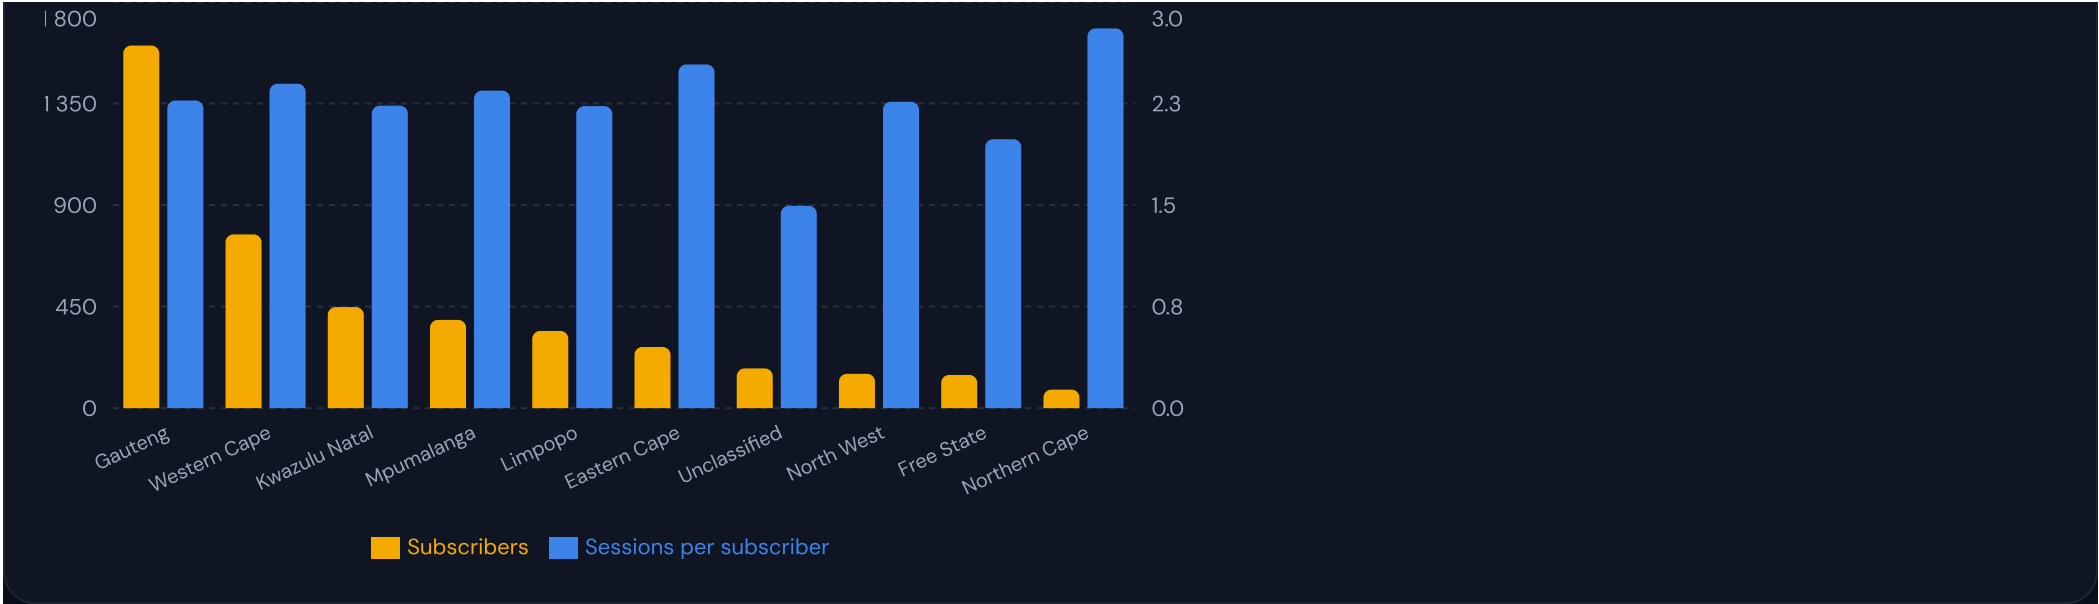

Engagement tiers

Subscribers by number of sessions

Provincial reach vs. depth

Subscribers and sessions per subscriber by province

💡 Recommended growth initiatives

- **Reactivation:** 51% of subscribers watched a single session. Trigger a 7-day win-back journey with a personalised "continue watching" pick from their first channel.
- **Data capture:** 4% unknown gender, 13% unknown ethnicity and 4% unclassified region block segmentation — run a profile-completion prompt with a content reward.
- **Referral and social:** Gauteng and Western Cape hold most of the base; every subscriber has an email and social handle on file, so use owned channels for refer-a-friend and creator partnerships in under-penetrated provinces (Northern Cape, Free State, North West).
- **Acquisition:** bundle live sport and event streams — the deepest-engagement content — into a free-trial weekend, then convert on the evening peak with a limited-time subscription offer.

Source: BrightTV subscriber and viewership dataset (9 995 of 9 995 sessions in view, 17 channels). Timestamps converted from UTC to SA Standard Time (UTC+2); one record represents one viewing session.
